

HealthFile Quick Start Documentation

Introduction:

HealthFile□ allows for comprehensive tracking of personal health information and history for personal use or physician use from any Windows PC, and it includes a data viewer for Blackberry devices. This document provides information on the handheld software, as the PC software has its own complete help file system. You may want to print this document for easier reference.

Installation:

To install the software, download the setup file (usually HealthFileBB_Setup.exe) to your PC. Then, double click the .exe setup file to start the PC installer. The installer will install the PC software first. When the software is first run after installing, instructions for installing the Blackberry components will be displayed, as an automated install is not possible to the Blackberry. Use these steps to configure the Blackberry components:

To install the device software:

1. Connect your BlackBerry to your desktop PC
2. Launch the BlackBerry Desktop Manager software on the PC
3. BACKUP your device with the Backup / Restore feature
4. Double-click the Application Loader icon
5. Click Next in the Application Loader Wizard
6. Click the Add button and browse to select / open this file:
C:\Program Files\HealthFile\healthfile.alx (or equivalent location)
7. Click Next and the software will be installed on the device

To setup synchronization for the Blackberry:

1. Start the BlackBerry Desktop Manager
2. Double-click the Synchronization icon
3. Make sure the 'Execute Add-in actions' box is checked
4. Click the Configuration tab
5. Click the Configure Add-ins button
6. Make sure the WakefieldSoft HealthFile item is checked

Once synchronization is enabled, the custom add-in will run each time the Blackberry is connected (if enabled). The add-in will check the PC database for any additions, deletions, or updates. If any changes are found, the add-in will transfer all data from the PC to the Blackberry device. If no changes are found, the add-in will quickly exit and not transfer data. This keeps your synchronization time to a minimum. A synclog.txt file is created in the data folder each time the add-in runs. This file contains synchronization progress and status information should it be needed.

Registration:

The software is initially installed as a trial version. After purchasing, a 5-digit registration code is provided. This 5-digit code, along with your device PIN, is entered on the PC software from the Help / Register menu. The registration code unlocks the full version features. No additional installation is required.

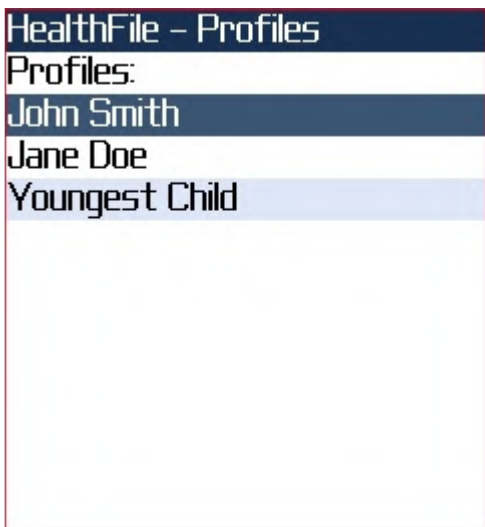

Getting Started:

The following screens and descriptions explain many of the features in HealthFile. The software was designed to be easy and intuitive, so it will be easy to get started. This documentation will help explain many of the features.

To start the software on the handheld, select the HealthFile icon from the Blackberry device main icon screen.

Profile List Screen:

Upon startup, the list of records is displayed. From this screen, the user may scroll through the record list and select any record to be viewed.

The menu allows other menu choices to be selected:

About - shows version information

Close - closes the program

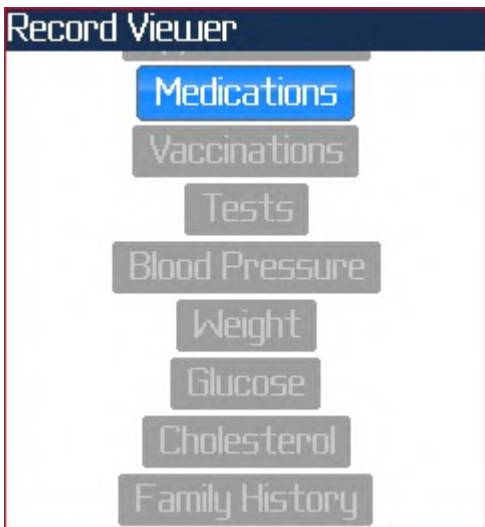

Topic Buttons Screen:

After selecting to view a profile name from the main list screen, the topic buttons will be displayed.

Scroll the screen to see all of the available topics.

Select any button to see data for that topic.

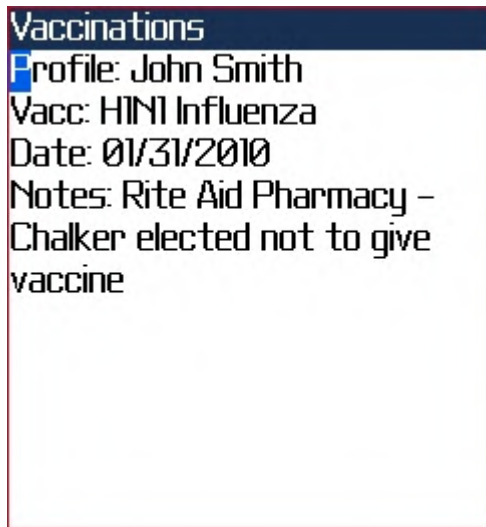

Topic Contents Screen:

After selecting a button to view data for any topic, the contents of that topic will be displayed in a list.

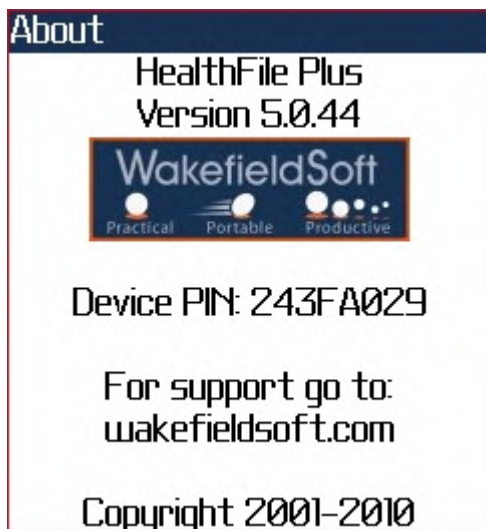

Scroll and select any item in the topic contents list to see the details of that record.

Record Details Screen:

After selecting an item from the topics contents list screen, the record details will be displayed.

About Screen:

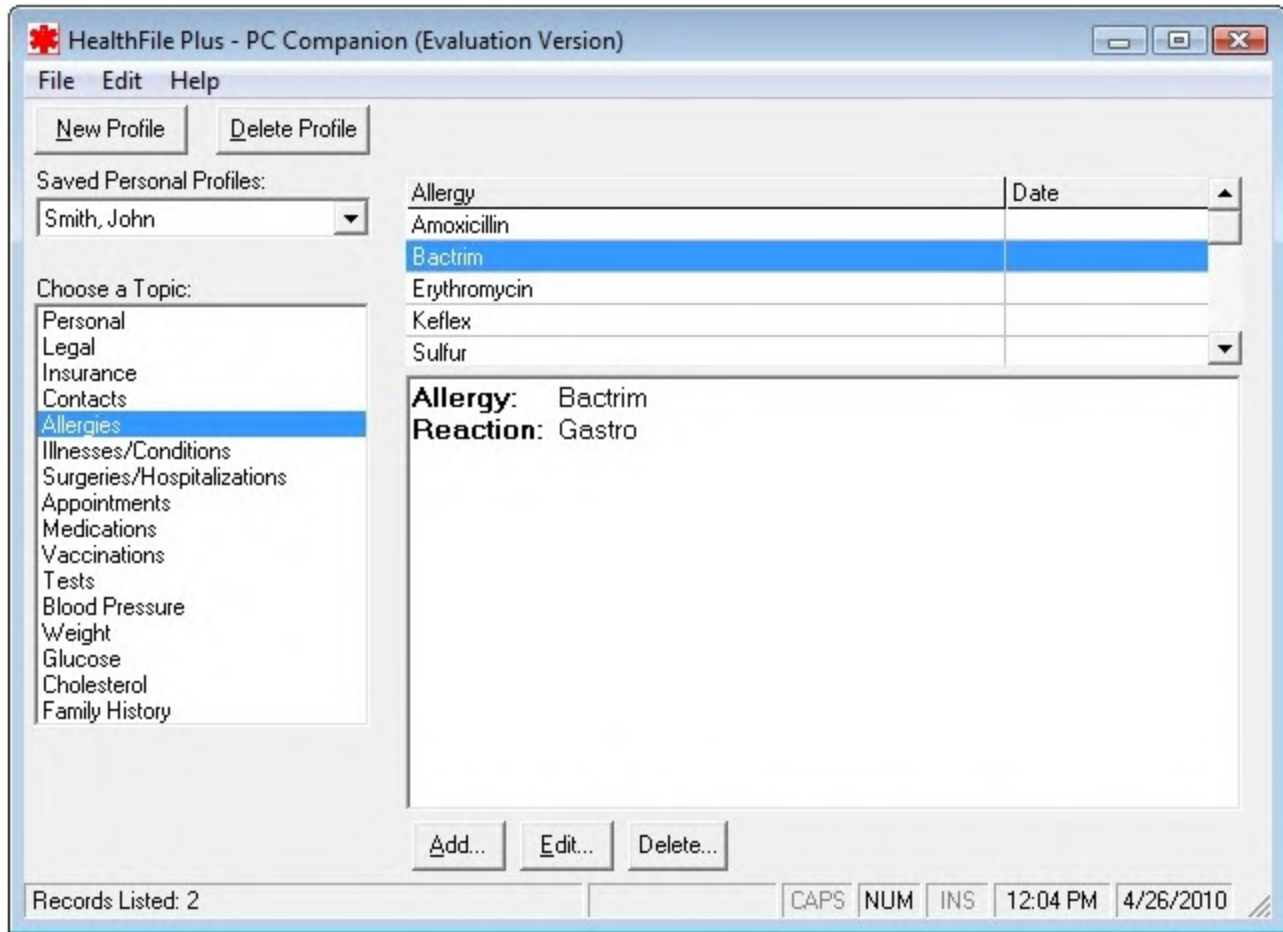

To view the program About screen, select the *About* menu item from the main profile list screen. A screen listing program information will be displayed, including program name, version number, copyright information, and support or contact information.

This screen will also display the Device PIN which is needed when purchasing. Your registration (unlock) code is based on the Device PIN.

HealthFile Desktop:

The PC software includes all of the features on the handheld software, plus other features specific to the desktop software. Features available only on the desktop software include: printing selected records, printing all records, importing records from delimited text files (CSV, etc.), exporting records to a CSV file, and more. Consult the help file on the PC desktop software for further information on the desktop features.

Conclusion:

If you are just evaluating or have already purchased HealthFile - Thanks!

If you have questions about the software, or cannot find an answer to a problem at our site, please email our support staff. We will work hard to resolve your issue and answer your questions.
